RAISE THE BAR

# RAISE THE BAR

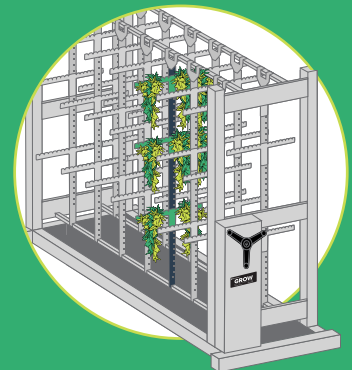

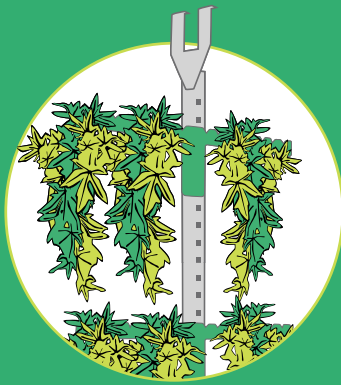

Post-harvest management is a crucial step in any cultivator's process. After all, it doesn't matter how much cannabis you grow if the final product is ruined due to improper drying or curing.

Promote best practices and streamline your drying process with Spacesaver's patent-pending GROW Drying System. Consisting of carts, racks, and mobile carriages that move on rails, the system is designed to help you and your team harvest more efficiently while also preserving plant quality.

## SOLUTION

### The concept is simple:

Hang plants once and they remain in place during the harvest, transport, and drying.

HARVEST

TRANSPORT

DRYING

## Why is this streamlined process so revolutionary?

By eliminating unnecessary handling, it helps keep plants' molecular structures intact, which reduces terpene and THC degradation. The system results in lower labor costs, a more valuable yield, and higher revenues — truly raising the bar on post-harvest processes.

# RAISE THE BAR WITH:

## Labor Efficiency

- Faster harvest
- Fewer touches
- No need for wires or zip ties
- No need for bins

## Flexibility & Optimization

- Choose the products you need
- Adjust on the fly for any plant size
- Gain more drying space in a smaller footprint
- Maintain high yield and high plant quality

## Better Work Environment

- More comfortable working conditions
- Easy to clean
- Multi-tiered
- Vertical posts are easy to move from cart to rack
- Durable, corrosion-resistant materials

## Complete Solutions

- Harvest, transport, and dry while eliminating unnecessary handling
- Integrate with GROW Mobile System for hands-free support during harvest
- One-stop shop for space planning, consulting on accessories, installation, and maintenance
- We bring our expertise or can work with your consulting team

GROW DRYING SYSTEM

# HOW IT WORKS

The GROW Drying System consists of carts, racks, and mobile carriages. Vertical posts and T-bars are compatible with these components, securely storing plants from the moment they're harvested until the drying process is complete.

## GROW Drying Cart

**T-BARS**

Adjust on 1.5" increments for clippings of any length

**VERTICAL POSTS**

Add, remove, or move depending on width of clippings

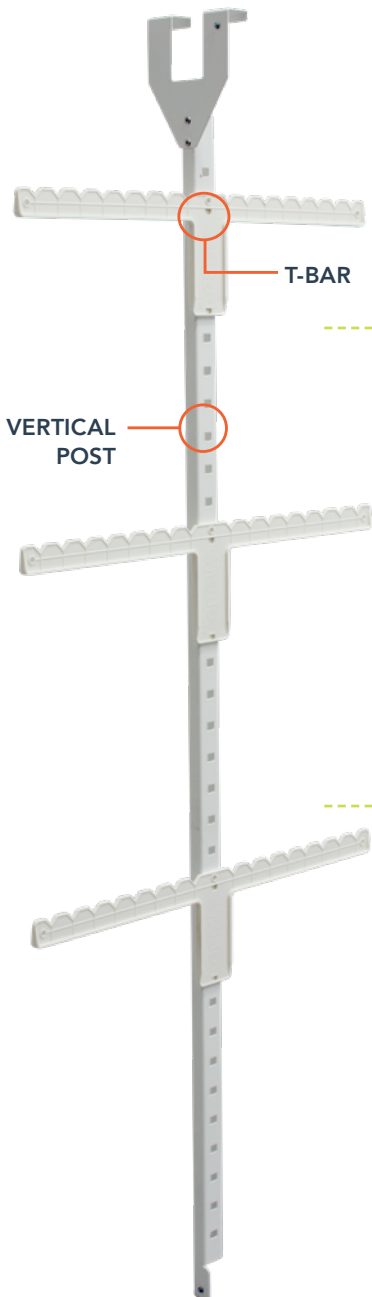

**CATCH TRAYS**

Remove and clean between uses

**CART COMPONENTS:  
ADJUST ON  
THE FLY**

- Optimize Space
- Promote Labor Efficiency
- Provide Ventilation

## Vertical Post and T-Bar

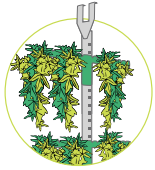

## GROW Drying Rack

## GROW Mobile Racking

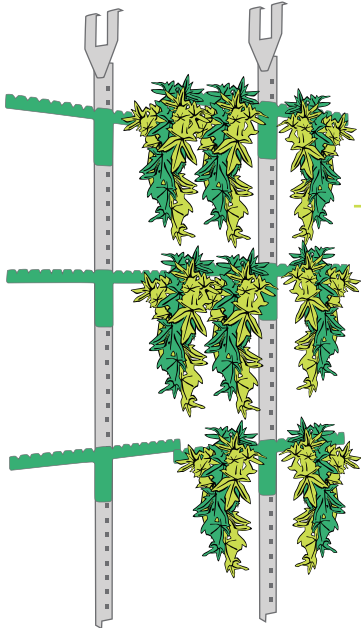

## GROW DRYING SYSTEM

# HARVEST

Roll the carts into the harvest room. To free up your hands for cutting and hanging plants, you can either set a T-bar into the notches on your GROW racking upright or hang the entire vertical post on the beam.

Hang plants on the T-bar. When a T-bar is full, remove it from the GROW rack upright, easily weigh it using the hole at the top, and position it on the vertical post on the rack in the cart.

The tray at the bottom of the cart catches fallen plant material.

When the first vertical post is full, continue to add vertical posts to achieve optimal plant density. Each vertical post can bear up to 50 pounds (22.7 kg).

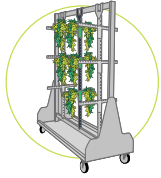

## CLEANING

T-bars are made of BPA-free ABS plastic and can be cleaned or replaced after each use.

All other components are made of easy-to-clean steel with powder-coat antimicrobial paint.

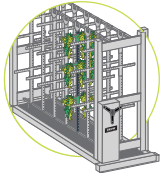

## GROW DRYING SYSTEM

# TRANSPORT

The cart allows you to move harvested plants to the drying room with minimal disturbance. Plants stay on the same T-bar and vertical post throughout the process.

## GROW DRYING SYSTEM

# DRYING

Remove the vertical posts with attached T-bars from the cart and hang them on the mobile racking.

*(Smaller operators might choose to keep them on the carts throughout the drying process.)*

Position vertical posts to ensure plants are well ventilated.

Take full advantage of every cubic foot of your drying room. Racks can extend to your room's full vertical height, and mobile carriages eliminate wasted space in the aisles to allow for more drying space in a smaller footprint.

## RAISES THE BAR

We offer the quality, service, and expertise you need to improve efficiency and profitability.

### Quality & Durability

- Durable materials, including heavy-duty steel and anti-microbial powder-coat paint
- Made in the USA

### Experience & Local Expertise

- Expert local space planning services
- Installation and long-term maintenance
- Staff training on system use
- Long-term service and maintenance
- 50 years in business
- 300,000 installations throughout North America and around the world

### Customized for You

- Expert space planning services
- Systems sized for your space and your needs
- Phased installation available

### Complete Solutions

- We bring our own expertise or we can work with your consulting team
- Integrate your existing racking, or we can advise on new systems
- Our partnership with Hawthorne Gardening Company offers the best brands in horticulture
